

In 1988 a small group of young programmers formed BIS (Business & Information Systems Co). The founders came from a wide variety of programming environments and business, which enabled BIS to get off to a smashing start. The first year of the company's operations brought a revenue of 2.5 million roubles, most of which were ploughed back into the business.

The company being so successful encouraged us to branch out, so we have established shops in Kiev, Mariupol, Dnepropetrovsk, Leningrad, Moscow and Latvia.

Although we are doing some manufacturing, mostly of computer auxiliaries, our speciality is software.

We have comfortable and spacious facilities and offices in down-town Donetsk, the centre of a large industrial region in the Ukraine. We are thus placed right in the middle of so much business activity thriving under *perestroika* conditions.

The *key* component of our organizational and professional ethics is high quality of our products and services, and customer satisfaction.

We have had all our packages tested by some international computer companies operating in this country. Their experts were quite impressed by our products and at the moment are cooperating with us.

Besides, our firm is an official commercial and service agent of RANK XEROX (Great Britain).

We do believe, however, that our potential is high enough for us to establish wider international contacts.

спасибо

SOFTWARE

- **BISLAN 2.03** Networking program package and hardware for up to eight PC's separated by up to 2,0 km. Three-wire bus.RS 232 interface. 115 Kbaud. Terminal emulation with exact image transmission. \$79
(per each computer)
- **BISNET 2.0** Nondedicated server. Any MS DOS computers as server and workstations. Three-wire bus. 115 Kbaud. Less than 100 Kbytes on distributive diskette. Alternative to NOVELL for many applications! \$119
(per each computer)
- **COPY PROTECTOR 2.0** Package transforms COM, EXE and SYS files so that they can only be run on PC where the package has been installed. Protection does not affect back-up files and does not use special disk sectors \$49
- **IMMUNER 2.0** Package consists of four program. Driver IMMUNER protects the system against most viruses, which lose their ability to reproduce and act. System acquires stable immunity. When viruses are removed, the process is visualized on directory tree (DISINFECTOR 460) or Norton Commander-type user interface (DISINFECTOR 5.60) \$99
- **INTELLECTUAL WRITE PROTECTOR 1.40** Efficient antivirus and antitrojan package. Ensures write protection of specified files and boot disk sectors, although not preventing one from using them in a normal way. Using our PORT WATCH CARD 1.1 or 2.0 your PC will be protected against direct inputs via disk controller ports. \$149
With PORT WATCH CARD 1.1..... \$229
With PORT WATCH CARD 2.0 \$249
- **FONT GENERATOR** allows any new font to be designed and edited. Characters of ANY languages can be captured by a scanner from a hard copy and entered into FONT GENERATOR using program FONT CAPTOR. \$199
- **SPAI-86 A/D** converting hardware/software product for fast-varying signals with wide frequency spectrum. It can make your PC into a powerful measuring system. \$99
- **BIS Utilities** for MS DOS offer options unavailable in any package, viz., RAM disk driver, memory analyzer, CMOS chip control, screen print, automatic copying of opened files, etc. \$89

- **BOLD INTERCEPTOR 1.20** is a very useful tool for programmers who work with interruptions in MS DOS; easily becomes residential, can visualize RAM \$29
- **WINDOW CREATOR 5.21** is a beautiful tool for PASCAL programmers, which can readily catch from a screen or create, edit and debug, pack and unpack windows of any colour and configurations for all types of monitors. \$29

640 Kbytes is no limit!

- **CONVENTIONAL MEMORY ENLARGER 736** enlarges the accessible MS DOS memory by appending 96 Kbytes from the EGA and VGA card in text modes. All of 736 Kbytes will be accessible for any program. Driver body only takes up 320 bytes in RAM \$79
